

# Rehaan Shaw

Irvine, CA | [linkedin.com/in/rehaanshaw](https://www.linkedin.com/in/rehaanshaw) | +1 (562) 640-7026 | [rehaanshaw@gmail.com](mailto:rehaanshaw@gmail.com) | [github.com/Ray-Shaw06](https://github.com/Ray-Shaw06)

## EDUCATION

### University of California, Irvine

Irvine, CA

B.S in Computer Science

Expected Graduation Date: June 2028

- Incoming transfer student, Fall 2026 — Donald Bren School of Information and Computer Sciences
- Coursework: Introduction to Software Engineering, Introduction to Data Management, Probability & Statistics for Computer Science

### Pasadena City College

Pasadena, CA

Associate of Applied Science, Computer Science

January 2025 - June 2026

- GPA: 3.78 | 79 units completed | Dean's Honors (Spring 2025, Fall 2025) | Honors Program
- Coursework: Data Structures (C++), Fundamentals of Computer Science I-III (C++, Java), Discrete Mathematics, Linear Algebra, Multivariable Calculus, Differential Equations

## PROJECTS

### SpotterAI — AI Fitness Copilot with Deterministic Safety Auditing

spotterai.xyz

JavaScript (ES Modules), HTML, CSS, Web Storage API, Vercel

[github.com/Ray-Shaw06](https://github.com/Ray-Shaw06)

- Shipped a free, no-signup AI training platform to a live public domain, architecting it as 22 vanilla-JavaScript ES modules with a hand-rolled client-side router and zero framework dependencies.
- Made AI-generated training plans auditable by building a deterministic, code-based evaluator that runs 11 automated safety and quality checks and returns a transparent 0-100 rubric score, flagging unsafe programming, inadequate recovery, excessive volume, and injury conflicts before the user trains.
- Cut hosting cost to \$0 and removed the signup barrier by designing a local-first architecture that persists workout, nutrition, bodyweight, and pain-report data in browser storage, with JSON export and import for portability.
- Delivered on-device exercise form checking and a conversational coach across 10 feature modules without sending user data to a backend, and kept the interface keyboard-accessible with a custom focus-trap module.

### Graphing Calculator — Expression Parser & Evaluator

C++

- Correctly evaluated arbitrary user-entered mathematical expressions by implementing the shunting-yard algorithm with stack-based postfix evaluation, resolving operator precedence and nested parentheses.
- Prevented invalid-input failures across multiple function types by adding input validation, error handling, and history tracking.

### Battleship — Terminal Game with Adaptive CPU Opponent

C++

- Improved CPU hit rate over random guessing by designing a search that switches from probabilistic targeting to deterministic adjacent-cell hunting after a hit, on a 2D-array board with rule-based placement and shot validation.

## WORK EXPERIENCE

### Handshake AI

Remote

Contract AI Trainer - Data Labeling Specialist

November 2025 - Present

- Consistently exceeded internal quality benchmarks on large language model training data by labeling and reviewing model outputs against detailed rubrics for correctness, consistency, and policy compliance.
- Improved model robustness by identifying prompt-level failures and edge cases during evaluation and documenting them for the review pipeline.

## LEADERSHIP EXPERIENCE

### AI & Machine Learning Club, Pasadena City College

Pasadena, CA

Secretary & Social Media Intern

March 2025 - June 2026

- Kept the officer team aligned on action items across two semesters by maintaining meeting minutes, shared calendars, and task lists as a single source of truth.
- Promoted the AI Horizons Convention by designing and publishing the "Event Partner Reveal" announcing the club's partnership with Caltech's mentorship program.

## SKILLS

**Skills:** C++ | Java | Python | JavaScript (ES Modules) | HTML | CSS | Git | GitHub | Vercel | Web Storage API | Data Structures & Algorithms | Discrete Mathematics | Linear Algebra | Client-Side Architecture | Web Accessibility | Data Annotation & Model Evaluation

**Certifications:** freeCodeCamp Responsive Web Design | freeCodeCamp Scientific Computing with Python
