EDUCATION

University of California, Irvine

Irvine, CA

B.S. in Computer Science

Expected Graduation: June 2028

- Incoming transfer student, Fall 2026, Donald Bren School of Information and Computer Sciences
- Coursework: Introduction to Software Engineering, Introduction to Data Management, Probability & Statistics for Computer Science

Pasadena City College

Pasadena, CA

Associate of Applied Science, Computer Science

January 2025 - June 2026

- GPA: 3.78 | 79 units completed | Dean's Honors (Spring 2025, Fall 2025) | Honors Program
- Coursework: Data Structures (C++), Fundamentals of Computer Science I-III (C++, Java), Discrete Mathematics, Linear Algebra, Multivariable Calculus, Differential Equations

WORK EXPERIENCE

Handshake AI

Remote

Contract AI Trainer, LLM Evaluation & Benchmark Authoring

November 2025 - Present

- Author Terminal-Bench 2 tasks that stress AI coding agents, each a Docker environment containing a real fault, a written instruction, a test suite, and a reference solution, along with the grader that marks agent attempts.
- Validate every task with a red/green proof, requiring tests to fail on the untouched container and pass after the reference solution, so a task is neither accidentally pre-solved nor unsolvable.
- Write generalization tests that substitute held-out inputs at grade time, closing the failure mode where an agent passes a parsing task by printing the expected answer; previously labeled and reviewed model outputs against detailed rubrics for correctness, consistency, and policy compliance.

PROJECTS

SpotterAI, AI Fitness Copilot with Deterministic Safety Auditing

spotterai.xyz

JavaScript (ES Modules), Gemini, Firebase Admin, Vercel Serverless

github.com/Ray-Shaw06/spotterai

- Made AI-generated training plans auditable by building a deterministic, pure-code evaluator that runs 14 named safety and quality checks with zero model calls in the audit path, surfacing flags ahead of the plan rather than a score.
- Benchmarked the evaluator at 18 of 18 risky plans caught and 0 safe plans incorrectly flagged across 23 red-team cases, wired into CI so a regression fails the build, with a public red-team page anyone can use to attack it.
- Shipped and deployed solo to a live public domain as 86 client-side ES modules with a hand-rolled router and zero framework dependencies, backed by 6 Vercel serverless functions and 78 test files.
- Cut hosting cost to \$0 and removed the signup barrier with a local-first architecture that keeps workout, nutrition, bodyweight, and pain data in browser storage, with JSON export and import for portability.

Transfer Navigator, ASSIST Articulation Planner

transfer-navigator.vercel.app

Next.js, React, TypeScript, pdfjs-dist

github.com/Ray-Shaw06/transfer-navigator

- Turned California ASSIST articulation agreements into term-by-term transfer plans across 116 community colleges and 65 campuses, against an undocumented API with an XSRF handshake, a rate limit, and no CORS headers.
- Kept the tool useful where the API has no agreement by adding a client-side PDF parsing fallback, covering the school pairings that no other tool handles.

Graphing Calculator, Expression Parser & Evaluator

C++

- Evaluated arbitrary user-entered expressions by implementing the shunting-yard algorithm with stack-based postfix evaluation, resolving operator precedence and nested parentheses.

LEADERSHIP EXPERIENCE

AI & Machine Learning Club, Pasadena City College

Pasadena, CA

Secretary & Social Media Intern

March 2025 - June 2026

- Kept the officer team aligned on action items across two semesters by maintaining meeting minutes, shared calendars, and task lists as a single source of truth.
- Promoted the AI Horizons Convention by designing and publishing the "Event Partner Reveal" announcing the club's partnership with Caltech's mentorship program.

SKILLS

Skills: C++ | Java | Python | JavaScript (ES Modules) | TypeScript | React | Next.js | HTML | CSS | Docker | Bash | pytest | Git | Vercel | Data Structures & Algorithms | LLM Evaluation & Benchmark Design | Deterministic Output Auditing | Client-Side Architecture | Web Accessibility

Certifications: freeCodeCamp Responsive Web Design, Scientific Computing with Python
