

REHAAN SHAW

Irvine, CA | (562) 640-7026 | rehaanshaw@gmail.com | linkedin.com/in/rehaanshaw | github.com/Ray-Shaw06 | rehaanshaw.vercel.app

EDUCATION

University of California, Irvine

B.S. in Computer Science, Donald Bren School of Information and Computer Sciences

Irvine, CA

Expected June 2028

Incoming transfer student, Fall 2026 | Coursework: Software Engineering, Data Management, Probability & Statistics for CS

Pasadena City College

A.S. in Computer Science

Pasadena, CA

January 2025 - June 2026

GPA: 3.78 | 79 units completed | Dean's Honors (Spring 2025, Fall 2025) | Honors Program

Coursework: Data Structures (C++), Fundamentals of Computer Science I-III (C++, Java), Discrete Mathematics, Linear Algebra, Multivariable Calculus, Differential Equations

EXPERIENCE

Handshake AI

Remote

Contract AI Trainer, LLM Evaluation & Benchmark Authoring

November 2025 - Present

- Author evaluation tasks measuring whether AI coding agents can fix real software faults, each validated by a two-sided proof that its tests fail on the untouched container and pass after the reference fix, by building containerized environments pairing a seeded fault with an instruction, a test suite, and a reference solution.
- Closed a scoring loophole that let an agent pass by printing an expected answer instead of solving the task, by writing generalization tests that substitute held-out inputs at grade time.
- Delivered a complete, validated task on the first night of the project starting from no Docker experience, by self-teaching the tooling on the job; previously reviewed and labeled model outputs against detailed rubrics for correctness, consistency, and policy compliance.

PROJECTS

SpotterAI — Deterministic Safety Auditor for LLM Output

spotterai.xyz

JavaScript (ES Modules), Node Serverless, Gemini, Firebase, MediaPipe, Vercel, \$0 infrastructure

github.com/Ray-Shaw06/spotterai

- Made AI-generated training plans auditable in a domain where the user cannot check the answer, as measured by 14 named safety checks that run with zero model calls in the audit path, by building a pure-code evaluator that reports flags ahead of the score and returns "not assessed" rather than "pass" when it lacks an input.
- Benchmarked the evaluator at 18 of 18 unsafe plans caught and 0 of 5 safe plans falsely flagged across a 23-case red-team suite, by driving both a CI gate and a public page anyone can attack live in the browser from one source of truth.
- Grew coverage to 845 passing automated tests across 78 files with zero test-framework dependencies, by using Node's built-in runner on every push through GitHub Actions.
- Removed the signup barrier and the hosting bill entirely, by shipping a local-first architecture that keeps workout, nutrition, bodyweight, and pain data in browser storage with JSON export and import.

Transfer Navigator — ASSIST Articulation Planner

transfer-navigator.vercel.app

Next.js, React, TypeScript, pdfjs-dist, Vercel

github.com/Ray-Shaw06/transfer-navigator

- Turned California ASSIST articulation agreements into term-by-term transfer plans across 116 community colleges and 65 receiving campuses (9 UC, 23 CSU, 33 private), by reverse-engineering an undocumented API that requires an antiforgery handshake and returns no CORS headers.
- Held the site inside ASSIST's ceiling of 50 calls per 5 minutes per IP, which a hosted deployment shares across every visitor rather than per student, by combining week-to-month CDN caching with a token bucket that throttles the site before ASSIST does.
- Covered the school pairings no other tool handles, by adding a fallback that parses an uploaded agreement PDF entirely in the browser without contacting ASSIST or transmitting the student's coursework.

Graphing Calculator — Expression Parser & Evaluator

C++

- Evaluated arbitrary user-entered expressions with correct operator precedence and nested parentheses, by implementing the shunting-yard algorithm with stack-based postfix evaluation, input validation, and error handling.

LEADERSHIP

AI & Machine Learning Club, Pasadena City College

Pasadena, CA

Secretary & Social Media Intern

March 2025 - June 2026

- Kept the officer team aligned across two semesters and promoted the AI Horizons Convention, by maintaining minutes, shared calendars, and task lists as a single source of truth and publishing the "Event Partner Reveal" announcing the club's partnership with Caltech's mentorship program.

SKILLS & CERTIFICATIONS

Languages: C++, Python, Java, JavaScript (ES Modules), TypeScript, HTML/CSS, Bash

Frameworks & Tools: Node.js, React, Next.js, Docker, Git, GitHub Actions, Vercel, Firebase, pytest, Vitest

Concepts: Data Structures & Algorithms, REST API Design, LLM Evaluation & Benchmarking, Deterministic Output Auditing, CI

Certifications: freeCodeCamp Responsive Web Design; Scientific Computing with Python
